

Assembly Instructions

Flying Instructions

1. Always find a location that is open and free of buildings or trees.
2. With your back to the wind, release your kite into the air.
3. Let the line out slowly while occasionally tugging to gain altitude.
4. For an assisted launch, have a friend hold your kite 75 feet / 22.8 meters downwind and release your kite.
5. Pull in line to gain altitude and release slowly for more distance.

Kite Safety

- NEVER fly near busy streets.
- NEVER fly near an airport.
- NEVER fly over people.
- NEVER fly near tall buildings or trees.
- Do not fly near overhead power lines.
- NEVER try to retrieve your kite from power lines.
- Call your local power company for assistance.
- Never fly in thunderstorms.

WARNING!

Do not fly near overhead power lines.
